

NEW FORD 351W CROSS-RAM INJECTION SYSTEM FROM TWM INDUCTION

TWM Induction presents a cross-ram electronic fuel injection throttle body assembly for the Ford 351W small block engine. Eight long, 50 mm runners feature screw in billet air horns and provide stump-pulling torque with looks your customers will appreciate.

Our valley plate, with extended port wall construction enables us to machine several different port configurations from OE to 225's and beyond.

This new cross-ram assembly also features additional under-hood clearance not available with many down draft manifolds, giving you more choices to offer your customers.

Soon to be available for Chevrolet 350, Chevrolet Big Block, LS, Ford 302 and 5.0 "Cammer" engines.

Part #2009-5008 - Retail price \$5,795.00.

This system includes TWM's throttle bodies, injectors, fuel rails, throttle position sensor (TPS) and adjustable fuel pressure regulator. Engine Control Unit (ECU), high-pressure pump, and filter screens are extra. Ask us for package pricing along with engine builder and distributor pricing.

Find additional information on these new products and our entire line of fuel injection systems and components on our website at www.twminduction.com.
